

# Locking Devices

Lockcases | Cylinders | Standards

# Technical Details

BS EN 12209: 2003 Mechanically operated locks, latches and locking plates.

Products tested to British and European standards provide greater durability, longer warranty periods, peace of mind and evidence of professional specification.

Under the standard each product is tested and classified accordingly to show its compliance.

The identification of an 11-digit code is visible on the individual product. Each digit represents a category and how it measured against the standard to which it was tested.

## Digit 1: Category of use

1 = Light use. For use by people with a high incentive to exercise care and with a small chance of misuse.

2 = Normal use. For use by people with some incentive to exercise care but where there is some chance of misuse.

3 = Extreme use. For use by people where there is little incentive to exercise care and where there is a high chance of misuse.

## Digit 2: Durability

A = 50,000 test cycles; no load on latch bolt.

B = 100,000 test cycles; no load on latch bolt.

C = 200,000 test cycles; no load on latch bolt.

F = 50,000 test cycles; 10 N load on latch bolt.

G = 100,000 test cycles; 10 N load on latch bolt.

H = 200,000 test cycles; 10 N load on latch bolt.

L = 100,000 test cycles; 25 N load on latch bolt.

M = 200,000 test cycles; 25 N load on latch bolt.

R = 100,000 test cycles; 50 N load on latch bolt.

S = 200,000 test cycles; 50 N load on latch bolt.

W = 100,000 test cycles; 120 N load on latch bolt.

X = 200,000 test cycles; 120 N load on latch bolt.

## Digit 3: Door mass and closing force

1 = up to 100kg door mass; 50 N maximum closing force.

2 = up to 200kg door mass; 50 N maximum closing force.

3 = above 200kg door mass or specified by the manufacturer; 50 N maximum closing force.

4 = up to 100kg door mass; 25 N maximum closing force.

5 = up to 200kg door mass; 25 N maximum closing force.

6 = above 200kg door mass or specified by the manufacturer; 25 N maximum closing force.

7 = up to 100kg door mass; 15 N maximum closing force.

8 = up to 200kg door mass; 15 N maximum closing force.

9 = above 200kg door mass or specified by the manufacturer; 15 N maximum closing force.

## Digit 4: Suitability for use on fire/smoke doors

0 = not approved for use on fire/smoke resisting door assemblies.

1 = suitable for use on fire/smoke resisting assemblies, subject to satisfactory assessment of the contribution of the lock or latch to the fire resistance of specified fire/smoke resisting door assemblies.

## Digit 5: Safety

Only 1 grade of safety is identified.

0 = no safety requirement.

## Digit 6: Corrosion resistance and temperature

0 = no defined corrosion resistance, no temperature requirement.

A = low corrosion resistance, no temperature requirement.

B = moderate corrosion resistance, no temperature requirement.

C = high corrosion resistance, no temperature requirement.

D = very high corrosion resistance, no temperature requirement.

E = moderate corrosion resistance, temperature requirement from -20°C to +18°C.

F = high corrosion resistance, temperature requirement from -20°C to +18°C.

G = very high corrosion resistance, temperature requirement from -20°C to +18°C.

## Digit 7: Security and drill resistance

1 = minimum security and no drill resistance.

2 = low security and no drill resistance.

3 = medium security and no drill resistance.

4 = high security and no drill resistance.

5 = high security with drill resistance.

6 = very high security and no drill resistance.

7 = very high security with drill resistance.

## Digit 8: Field of door application

15 grades of door application are identified and summarised in the table below:

Grade	Type	Application 1	Application 2	Application 3
A	Mortice	Unrestricted application		
B	Mortice	Hinged door		
C	Mortice	Sliding door		
D	Rim	Unrestricted application		
E	Rim	Hinged door		
F	Rim	Sliding door		
G	Bored lock	Unrestricted application		
H	Mortice	Hinged door	Supported	
J	Rim	Hinged door	Inwards	
K	Mortice	Hinged door		Locked from inside
L	Mortice	Sliding door		Locked from inside
M	Rim	Hinged door		Locked from inside
N	Rim	Sliding door		Locked from inside
P	Mortice	Hinged door	Supported	Locked from inside
R	Rim	Hinged door	Inwards	Locked from inside

# Technical Details

BS EN 12209:2003 Mechanically operated locks, latches and locking plates.

## Digit 9: Type of key operation and locking

- 0 = not applicable.
- A = cylinder lock or latch, manually locking.
- B = cylinder lock or latch, automatically locking.
- C = cylinder lock or latch, manually locking with intermediate locking.
- D = lever lock or latch, manually locking.
- E = lever lock or latch, automatically locking.
- F = lever lock or latch, manually locking with intermediate locking.
- G = lock or latch without key operation, manually locking.
- H = lock without key operation, automatically locking.

## Digit 10: Type of spindle operation

- 0 = lock or latch without follower.
- 1 = lock or latch for knob or sprung lever handle operation.
- 2 = lock or latch for unsprung lever handle operation.
- 3 = lock or latch for heavy duty unsprung lever handle operation.
- 4 = lock or latch for heavy duty unsprung lever handle operation specified by the manufacturer.

## Digit 11: Key identification requirement

- 0 = no requirements.
- A = minimum three detaining elements.
- B = minimum five detaining elements.
- C = minimum five detaining elements, extended number of differs.
- D = minimum six detaining elements.
- E = minimum six detaining elements, extended number of effective differs.
- F = minimum seven detaining elements.
- G = minimum seven detaining elements extended number of effective differs.
- H = minimum eight detaining elements, extended number of effective differs.

## Example:

2 H 5 1 0 E 5 A F 2 C

The above code signifies a mechanically operated lock and locking plate for use in an application where people have an incentive to exercise care, able to withstand a durability of 200,000 cycles with a 10 N load on the latch bolt, on a door with a mass of up to 200kg and a maximum closing force of 25N, suitable for use on a fire/smoke resisting door assembly, no safety requirement, moderate corrosion resistance in temperatures ranging from -20°C to +18°C, with high security and drill resistance for any use in any mortice application, with a manual locking lever lock or latch unsprung lever handle operation, a minimum of five deadlocking elements and an extended number of effective differs.

## Marking:

The standard requires the following additional information to accompany the CE Marking required for locks and latches intended for use on fire resisting doors and smoke control doors.

- a) The identification number of the notified certification body.
- b) The name or identifying mark of the manufacturer.
- c) The registered address of the manufacturer.
- d) The last two digits of the year in which the marking was applied.
- e) The number of the EC certificate of conformity, reference to EN 12209:2003.
- f) The classification code of the product.

# Euro Locks

European lock case range produced to DIN standards and dimensions, offering reliable heavy duty locks in standard applications.

All 55mm backset only.

Single throw deadbolt locks are suitable for use with unsprung lever handles.

Investment casting of the followers and guided deadbolt mechanism make this a severe duty range.

Available radius and square.

External – lever operates latch bolt only, cylinder operates deadbolt

Escape Deadlock

IL020

Internal – lift lever to lock depress lever to unlock

External – cylinder operates deadbolt

Both locks must use single cylinders only

# Modular Lockcases

This severe duty range of locks offer a vast array of interchangeable applications. Using a symmetrical modular system gives the ability to change the function of the door easily. Compatible with Scandinavian oval cylinders only. The cylinder follower is above the handle line. Supplied with radius forends, ideal for factory prepared doors. Lockcases have a substantial 21mm throw deadbolt and 14mm projecting latchbolt. Uses unsprung lever handles only.

For BS EN179 escape functions, refer to Escape Hardware brochure.

## Sash Lock

Standard

High Security

Escape Function

For bathroom lock use either standard sashlock or standard deadlock with 62.0500 5mm follower conversion for use with indicator and turn.

# British Locks

A traditional range of locks to typical British dimensions, giving standard locking functions applicable to most common uses. Available pierced to take British Oval and Euro cylinders or 5 lever, where applicable. Light sprung (LS) or heavy sprung (HS) dependent on furniture selected. Brass latch and deadbolt with hardened steel rollers.

Detailed here are just a few functions. There are many special applications and non-standard locking solutions. Please contact Lloyd Worrall for further information.

### Standards

CE Marked.  
BS3621-1997 (IL073)

### Options

Restricted key duplication (RKS). Master keyed with each other (MK).  
Can be fitted with microswitch. Single Pole (SP) or Double pole (DP).

# Cylinders

# Technical Details

## BS EN 1303: 2005 Revision 1 Cylinders for Locks Requirements and Test Methods

Products tested to British and European standards provide greater durability, longer warranty periods, peace of mind and evidence of professional specification.

Under the standard each product is tested and classified accordingly to show its compliance. The identification of an 8-digit code is visible on the individual product. Each digit represents a category and how it measured against the standard to which it was tested.

### Digit 1: Category of use

Only one category is identified.

1 = keys shall resist a torque of 2.5Nm and still be usable.

### Digit 2: Durability

Three grade of durability will classify cylinders as either grade 4, 5 or 6 based on the number of test cycles achieved.

4 = 25,000 cycles.

5 = 50,000 cycles.

6 = 100,000 cycles.

Key strength is also tested to ensure there is no failure of the key within the durability test.

### Digit 3: Door mass

No requirement.

### Digit 4: Fire resistance

0 = no requirement.

1 = cylinders shall be fire tested in accordance with current fire test requirements or BS EN 1634-1.

### Digit 5: Safety

No requirement.

### Digit 6: Corrosion resistance

0 = no requirement.

A = conforms to grade 3 of BS EN 1670 as a minimum.

B = will resist temperature extremes of -20/+80°C

C = conforms to grade 3 of BS EN 1670 as a minimum and will resist temperature extremes of -20/+80°C.

### Digit 7: Key security

Cylinders are classified in grades 1 to 6, where 6 is the highest. The grade can differ from one side of a double cylinder to the other. The table below provides a summary of the main security criteria:

Requirement	Unit	Grades					
		1	2	3	4	5	6
Min number of effective differs	Number	100	300	15,000	30,000	30,000	100,000
Min number of movable retainers	Number	3	3	5	5	6	6
Max number of steps	-	100	70	60	60	60	50
Direct coding on key	%	Yes	Yes	No	No	No	No
Torque resistance of plug/cylinder	Nm	2.5	5	15	15	15	15

### Digit 8: Attack resistance

Cylinders are classified in grades 0, 1 and 2, where 2 is the highest. The table below provides a summary of the main requirements:

	Grade		
	0	1	2
Resistance to drilling (nett drilling time)	-	3 mins	5 mins
Resistance to chisel attack (number of defined blows)	-	30	40
Resistance to twisting attack (number of defined twists)	-	20	30
Resistance to plug/cylinder extraction (pull load)	-	15 kN	15 kN

Example:

1 6 - 0 - B 3 1

The above code signifies a cylinder meeting the required category of use, durability grade 6 with no fire resistant requirement, will resist temperature extremes of -20/+80 °C, has a grade 3 key security and grade 1 attack resistance.

Marking:

This standard requires that the classification relevant to the cylinder shall be quoted in the accompanying documentation, on its labelling or packing and/or by marking the product itself or by more than one of these methods.

The marking/labelling shall include the following:

- a: manufacturer's name or trademark, or other means of identification,
- b: product model identification,
- c: the 8 digit classification listed above,
- d: number of this European standard.

# 11 pin patented cylinders

Six pin tumblers plus sidebar mechanism with five sidepins. Mechanism and keyblanks are protected by worldwide patents. Incorporates anti-drill and anti-pick protection. 1.9 billion usable combinations. Dual security levels may be combined with lower cost medium security cylinders in the same system. Designed for large or complex master key systems. Assembled in our workshop facility.

There is a strict registration procedure and all keys are uniquely marked for greater key control.
